

Final Report

Your final report should be 2-3 pages in the template we provided you, but only have to include the following sections:

- Problem statement
- Method
- Empirical evaluation
- Conclusion

Introduction, related work and background are optional.

If your project is theoretical, the empirical evaluation can be only a description, you won't have to provide results. You will be able to submit empirical results later.

In real robots, it is ok if your evaluation contains a small number of experiments. The report should be 2-3 pages.

Please make sure that your report is clear, fluent, and grammatically correct. There are many useful tools that can help you achieve it.

Also make sure that your problem and solution is formally described with correct notations.
